EXPERIENCE

Hippo.uz — Frontend Engineer — Jan 2026 – Nov 2026

B2B e-document management (dms.hippo.uz) serving 100+ companies.

- Built a Word-like document template builder on TipTap/ProseMirror (typed fields, formula columns, DOCX/PDF import) for 11 document types, cutting document preparation from **5–15 min to ~1 min**.
- Introduced bulk E-IMZO e-signing: users sign, decline or cancel a whole day's documents in one run instead of one at a time.
- Cut initial JS by **66%** (952 → 319 KB gzip) and Total Blocking Time by 90% with code splitting and lazy loading; reduced API requests on core pages by 41%.
- Replaced 5-second polling with Server-Sent Events for real-time task updates; fixed race conditions in search and filters with request cancellation.

Progress Solution Technologies — Frontend Developer, then Team Lead — Nov 2024 – May 2026

Full-time developer, Nov 2024 – Dec 2025; part-time frontend team lead, Jan – May 2026.

- Built an in-house ERP that fully replaced the HolliHop CRM at Najot Ta'lim (**400+ staff, 3,000+ students**): student lifecycle, finance and RBAC, tested with Jest. React, MobX.
- Led a **3-person** frontend team across 5 parallel products: code review, release quality, task breakdown.
- Built solo two Next.js apps for Tashkent State Medical University's scholarship platform, used by **700+ students**; set up Docker and GitLab CI/CD auto-deploy.
- Built the public site and submission flow for qadriyatim.uz, a government heritage platform: resumable large-file uploads, Click payments, OneID sign-in.

PROJECT

Servio Kargo — SaaS for cargo companies · kargo.servio.uz — 2026 – Present

- Designed, built and launched solo with AI-assisted development: a Telegram bot for customers (tracking, status, price, balance) and an admin panel for staff (Excel import, bulk updates, debt tracking).
- Multi-tenant data model with roles; queued Telegram notifications with rate limiting; CI/CD with GitHub Actions and Docker. Next.js, Node.js, PostgreSQL, Drizzle.

SKILLS

TypeScript/JavaScript, React, Next.js, Zustand, MobX, Redux, TanStack Query, Tailwind CSS, TipTap/ProseMirror, Feature-Sliced Design · Node.js, PostgreSQL · Jest, React Testing Library, Docker, CI/CD
