OYATILLO ABDISHUKUROV

Frontend Engineer · Tashkent, Uzbekistan (open to remote and relocation)

+998 99 556 24 16 | oyatilloabdushkurov120@gmail.com · linkedin.com/in/oyatillo12 · github.com/Oyatillo12

Frontend engineer with 2+ years in React, Next.js and TypeScript, specializing in complex B2B interfaces: e-document workflows, E-IMZO e-signatures, data-heavy forms and performance. Led a 3-person frontend team.

Skills

Languages: HTML, CSS, JavaScript, TypeScript

Technologies: React, Next.js, Node.js/Nest, Vue 3, Zustand, MobX, TanStack Query, Tailwind CSS, Ant Design, MUI, Feature-Sliced Design

Testing & tooling: Jest, React Testing Library, Vite, webpack, Docker, GitLab CI/CD, Sentry

Experience

Hippo.uz — Frontend Engineer · Jan 2026 – Nov 2026 · Tashkent

dms.hippo.uz — B2B SaaS for electronic document management in the Hippo.uz ecosystem, used by companies such as Nestlé, Kapitalbank and Makro; integrated with Roaming e-documents and E-IMZO digital signatures. React 19, TypeScript, Zustand, Feature-Sliced Design.

- Built a Word-like document template builder (TipTap/ProseMirror) with typed fields, formula columns and DOCX/PDF import, powering 11 document types — invoice preparation down from 5–15 min to ~1 min.
- Introduced bulk E-IMZO signing, previously one document at a time: users now sign, decline or cancel a whole day's incoming documents in one run, with permission checks, pause/resume and auto-pause on connection loss.
- Switched task updates from 5-second polling to a Server-Sent Events stream on the client, so changes appear in real time without constant background requests.
- Cut initial JS by 66% (952 → 319 KB gzip) with route-based code splitting and lazy-loaded heavy libraries, reducing Total Blocking Time by 90%; removed redundant API calls, cutting requests on core pages by 41%.
- Fixed race conditions in search and filters where slow responses overwrote newer results, using request cancellation (AbortController) and de-duplication.

Progress Solution Technologies · Tashkent — *Frontend Team Lead (part-time)*, Jan – May 2026 · *Frontend Developer (full-time)*, Nov 2024 – Dec 2025

- Led a 3-person frontend team across 5 parallel products — owned code review, release quality and task breakdown; started weekly tech talks where team members took turns presenting a topic.
- Developed an in-house ERP that fully replaced the HolliHop CRM at Najot Ta'lim (400+ staff, 3,000+ students): built the student lifecycle, finance modules and RBAC, with unit and integration tests in Jest. React, TypeScript, MobX.
- Built solo two Next.js 16 apps for Tashkent State Medical University's scholarship platform, used by 700+ students to apply across 4 categories: application wizard, expert scoring; set up Docker and GitLab CI/CD auto-deploy.
- Built the public site and content submission flow for qadriyatim.uz, a live government heritage platform with content across 9 categories for every region: resumable large-file uploads, Click payments, interactive SVG map, with OneID sign-in. Next.js.
- Also: my-school.uz (Vue 3, Pinia); edfix.uz — promo codes in the course payment flow for 10k+ users.

Education & Languages

Frontend Development — Najot Ta'lim, Tashkent, Apr – Nov 2024
